I. ACKNOWLEDGEMENTS

First, we would like to thank the teachers who helped us make a successful project. Especially Mr. Nguyen Duc Thao was very enthusiastic to help us complete software projects. Thanks for the time he has "debug" or fix wrong for us, and teach us things unknown, help us to better understand and develop skills over the code for us to finish software the most successful way. Without the guidance of the teacher, then we think we will not be able to complete this software.

Although we have made many attempts, because of the limited time, the practice could not be able to avoid the mistakes and deficiencies. We hope teachers can consider and ignore our errors or deficiencies. And finally, we would like to offer many thanks to all our friends for their valuable suggestions and constructive feedbacks.

II. RATIONALE

In the world in general and in Vietnam in particular, information technology has to become a leading industry, an indispensable science and technology in life. The application of information technology to the social domains such as management, information, economics ... has created these applications are essentially alternative to manual management, minimizing the use of human resources in management, increasing efficiency, saving costs, time and effort.

When people all over the world have become so much concerned aout their health and diet, it is obvious that they continually seek out for gyms. So the application was created to make management easier and more efficient

III. INTRODUCTION

Gym Management is a system for computerizing the management of user for such tasks as management of customer lists, sell products, gym manager managemen, ...

IV. TARGETS AND OBJECTS OF THE RESEARCH

1. Research Targets

The main objective of the project is to create a gym management system to solve the difficulties in the management activities for the purpose of minimizing the use of human resources in management, increasing efficiency, saving costs, time and effort.

2. Research Objects

Our main objects are gym users and gym manager.

V. PROBLEM DEFINITION

- 1. Login
- 2. Account Management
- 3. Selling Category
- 4. Statistic
- 5. Customer Information Management
- 6. Product Management
- 7. Device Management
- 8. Salary Management
- 9. Finding Function
- 10. Change Password
- 11. Recovery Password

VI. THE TECHNOLOGY USED

1. Tools used

Eclipse, SQL Server 2014

2. Language Used

Java,SQL

VII. REQUIREMENT ATTRIBUTES

1. Critical Use Case Specification

USE CASE SPECIFICATION				
Use-case No.	UC01 Use-case Version 1.0			
Use-case Name Login				

Purpose:

To manage account allows users to log into the management system

Input:

User login to the management system by entering the required fields and push button "Login".

Output:

User who log on to the system successfully, it will show up the Admin Frame if account role is admin, Main Frame if account role is member.

USE CASE SPECIFICATION					
Use-case No.	e-case No. UC02 Use-case Version 1.0				
Use-case Name	Account Management				

Purpose:

Allow users to add, edit, delete the user of system.

Input:

User will add a customer by entering the required fields, select admin or user and push button "Add"

User will delete a customer by choose user in the list and push button "Delete"

User will edit information of a customer by choosing the user, then entering the required fields and push button "Edit"

Output:

User add a product, it will notify the user that has add successfully or not.

User delete a product, it will notify the user that has deleted successfully or not.

User edit a product, it will notify the user that has edit successfully or not.

USE CASE SPECIFICATION				
Use-case No.	UC03	Use-case Version	1.0	
Use-case Name	Selling Category			
Purpose:				
Input:				
Output:				

USE CASE SPECIFICATION

Use-case No.	UC04	Use-case Version	1.0
Use-case Name	Statistic		

Purpose:

Allow users to statistic benefit from customer.

Input:

User choose the the time to statistic from when to when.

User choose the pakage (how many months).

User press "Find".

Output:

User will see information if the data exists in the database corresponding the days and the pakage user choosed.

User will see nothing if the data didn't exist in the database corresponding the days and the pakage user choosed.

USE CASE SPECIFICATION				
Use-case No. UC05 Use-case Version 1.0				
Use-case Name Customer Information Management				

Purpose:

Allow users to add, delete, edit information of customer.

Input:

User will add a customer by entering the required fields and push button "Add"

User will delete a customer by choose customer in the list and push button "Delete"

User will edit information of a customer by choosing the customer, then entering the required fields and push button "Edit"

Output:

User add a customer, it will notify the user that has add successfully or not.

User delete a customer, it will notify the user that has deleted successfully or not.

User edit a customer, it will notify the user that has edit successfully or not.

USE CASE SPECIFICATION				
Use-case No. UC06 Use-case Version 1.0				
Use-case Name Product Management				

Purpose:

Allow users to add, delete, edit information about product which sells to customer

Input:

User will add a product by entering the required fields and push button "Add"

User will delete product by choose product in the list and push button "Delete"

User will edit product by choosing the product, then making changes and push button "Edit"

Output:

User add a product, it will notify the user that has add successfully or not.

User delete a product, it will notify the user that has deleted successfully or not.

User edit a product, it will notify the user that has edit successfully or not.

USE CASE SPECIFICATION			
Use-case No.	UC07	Use-case Version	1.0

Use-case Name	Device Management

Purpose:

Allow users to add, delete, edit information about device for customer using.

Input:

User will add a device by choosing the device, entering the required fields and push button "Add"

User will delete device by choose the device in the list and push button "Delete"

User will edit device by choosing the device, then making changes and push button "Edit"

Output:

User add a product, it will notify the user that has add successfully or not.

User delete a product, it will notify the user that has deleted successfully or not.

User edit a product, it will notify the user that has edit successfully or not.

USE CASE SPECIFICA	ATION		
Use-case No.	UC08	Use-case Version	1.0
Use-case Name	Salary Management		

Purpose:

Allow users to see and find the salary about employees.

Input:

User choose the time to find information from when to when.

User choose the role (admin/member/all)

User press "Find".

Output:

User will see information if the data exists in the database corresponding the days and the role user choosed.

User will see nothing if the data didn't exist in the database corresponding the days and the role user choosed.

USE CASE SPECIFICA	ATION		
Use-case No.	UC09	Use-case Version	1.0
Use-case Name	Finding function		

Purpose:

Allow users to add, delete, edit information of subject.

Input:

User will add a subject by entering the required fields and push button "Add"

User will delete a subject by choose subject in subject list and push button "Delete"

User will edit information of a subject by entering the required fields and push button "Edit"

Output:

User add a subject, it will notify the user that has add successfully or not.

User delete a subject, it will notify the user that has deleted successfully or not.

User edit a subject, it will notify the user that has edit successfully or not.

USE CASE SPECIFICATION

Use-case No.	UC10	Use-case	1.0
		Version	
Use-case Name	Change Password		

Purpose:

Allow users change password

Input:

User change password by entering the required fields include: user name, current password,new password and push button "Change"

Output:

System will notify the user that has changed successfully or not.

USE CASE SPECIFICA	ATION			
Use-case No.	UC11	Use-case	1.0	
		Version		
Use-case Name Recovery Password				

Purpose:

Allow users recovery password.

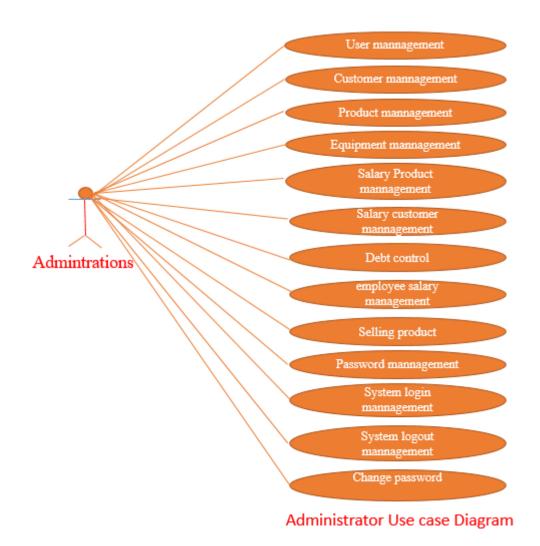

Input:

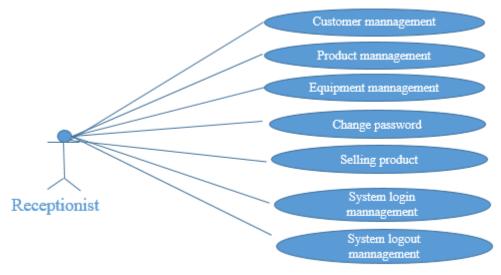

User recovery password by entering the required fields include: user name, email, secret code and push button "Submit"

Output:

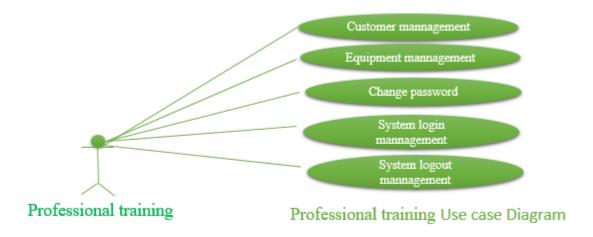

If these info user has type is right, the system will send password to user's email

IX. CONCLUSION

1. Conclude

To complete the 1st semester project, deliver the results as well as the products, our team has divided the specific tasks, as well as always trying to work and learn to develop and complete the products. good. However, due to lack of knowledge as well as work and completion, there are still some errors that cannot be completed correctly. The team will continue to complete the product to perfect and improve the components of the gym management software.

PROS:

- Have all basic function as the requirement
- Know how to develop a java application

CONS:

- Need more functions.
- Interface need to improves.
